
A DESIGNER'S TRIBUTE TO DIETER RAMS

Less, *but better.*

Research, design, and four build phases of a six-page editorial tribute to the work and ten principles of Dieter Rams. From a hand-coded white page to a multi-chapter Braun catalogue.

AUTHOR

Max McDonough

INTD-215 Designing for Screens

INSTRUCTOR

Colby May

TERM

Spring 2026 · Final Project

“

I believe designers should eliminate the unnecessary. That means products should be neither more nor less than what they need to be.

— DIETER RAMS

READ IT LIVE

The site is on the internet.

Deployed to GitHub Pages. Open any chapter, use the keyboard shortcuts, press the orange equals key, scroll the timeline dial. It all works.

<i>IX</i>	REFLECTION	What I learned · Slide 33	<i>X</i>	DECLARATION	Honest accounting · Closing · 34 — 35

II · WHY DIETER RAMS

No shortlist.

The minute the brief asked for a designer who shaped how I think about the work, the answer was Rams.

THE ENTRY POINT

I came to Rams through Apple. Before I knew his name, I knew the iPod's click wheel, the iMac G4's swivel arm, the iPhone's calculator. When I learned Jonathan Ive had cited Rams as his single greatest influence for two decades, the connection clicked.

The 1958 T 3 radio → the 2001 iPod. The 1987 ET 66 calculator → iOS Calculator in 2008. The same keypad logic, forty-three years apart.

WHY HIS FRAMEWORK, SPECIFICALLY

Rams's ten principles, written in 1976, remain the closest the field of industrial design has ever come to an ethical compass. Not a style. Not a movement. A *test*.

"Is my design good design?" — and a way to answer.

THE LINEAGE

Same keypad. *Forty-three years apart.*

Braun · 1958

T3 Pocket Radio

The first pocket transistor radio to refuse a knob. A perforated speaker grille became the entire face. Sliding power switch, recessed dial — nothing else.

43 YEARS

Apple · 2001

iPod 1st Generation

White plastic face, centred circular control, recessed screen. Jonathan Ive has repeatedly cited the T 3 as the direct ancestor.

The lineage repeats across the catalogue: ET 66 → iOS Calculator (2008) · L 2 Speaker → HomePod (2018) · 606 Shelving → Apple Park interiors.

PERSONAL INFLUENCE ON PRACTICE

Three things from Rams I now carry in my work.

01 · TESTABLE RESTRAINT

"Less, but better" isn't a feeling. You can audit a design against the ten principles and get a verdict. Changes how I critique my own work. Every project this year has gotten shorter, quieter, more specific because of him.

02 · FORM IS INVENTORY

The SK 4's clear lid in 1956 was radical because it refused to hide what was inside. Good design shows the user what they own. I think about that every time I'm tempted to disguise a UI.

03 · LONG-LASTING IS PRAISE

The 606 shelf has been in continuous production since 1960. The 620 chair since 1962. The opposite of the throwaway design economy. The brief I want my own work to meet.

So this project isn't only documentation. It's the longest I've spent inside one designer's head, deliberately — and the site is the artefact of that residency.

THE THESIS

Good design is testable.

If the work is the proof of the principles, the medium that documents the work should be the same proof — scaled to the screen.

The site I built doesn't only describe Rams's principles. It tries to **embody** them. Every interactive section is built around an actual Braun product as its interface metaphor — the calculator, the tuning dial, the studio meter, the hi-fi rack. The metaphor isn't decoration. It's the navigation.

DELIVERABLE

The artefact, end to end.

SITE

`index.html` · Cover · Hero + TOC
`about.html` · I · Biography + Timeline
`principles.html` · II · Ten Principles / ET 66
`work.html` · III · Nine Objects
`impact.html` · IV · Numbers + Legacy + Influence
`invitation.html` · V · Eleventh Principle

RESEARCH

`process/` · 10 UX research PDFs (01-08) + design board + hi-fi

IV · RESEARCH

Studying him before drawing him.

Before any pixel was placed, the project went through eight UX research deliverables — the standard sequence I've used in this course all semester.

01 · PERSONA	Design students · professional designers · architecture-curious readers
02 · EMPATHY MAP	Think / see / say / do – when looking up Rams
03 · JOURNEY MAP	Search → principle discovery → work browse → biography
04 · USER FLOW	Decision tree behind every primary task
05 · SITE MAP	Anchored sections (later restructured into six pages)

06 · MOOD BOARD	Warm off-white · IBM Plex · Braun-orange · perforated grids
07 · PRECEDENT	Vitsø.com · Rams documentary · MoMA · Braun archive
08 · WIREFRAMES	Low & mid-fidelity grids · component composition
— · DESIGN BOARD	Type ramp · colour · grid units · component library
— · HI-FI PROTOTYPE	Mockup the production build was implemented from

All ten artefacts live in [process/](#) and are linked from the site and process book.

RESEARCH → BUILD

Three takeaways *that survived to the build.*

01 / 03

Principles first, biography second.

The journey map showed nearly every visitor's primary intent is "remind me what the ten principles are."
Wireframe priority: principles directly after about, before the work catalogue.

02 / 03

Loud references, quiet layout.

Precedent research showed Vitsoë's own site is genuinely restrained — small type, generous white space, a single accent. The design board codified this: one accent, one type family, one grid.

03 / 03

Objects, never ornament.

Mood board explicitly excluded lifestyle photography that romanticises the work. Every product image on the final site is on a clean off-white "catalogue plate" with a thin inner border — Vitsoë's own treatment.

Every structural decision in the build traces back to one of these. Research wasn't a box to tick. It was the frame that made the design possible.

V · TYPOGRAPHY

One family. Three voices.

SANS — IBM PLEX SANS

Aa

All UI — navigation, body copy, captions, meta strips. Weights
200 · 400 · 500 · 600.

SERIF — IBM PLEX SERIF ITALIC

Aa

Editorial moments — chapter titles, principle headlines, pull
quotes, the closing mantra.

MONO — IBM PLEX MONO

Aa

Readouts, LED labels, kbd keys, colophon, colour swatches —
every moment pretending to be an instrument.

IBM commissioned Plex to replace Helvetica with a typeface that has personality but stays out of the way. Exactly the Rams brief — a typographic translation of "less, but better." Free under SIL OFL, served via Google Fonts.

V · COLOUR & GRID

One accent. *Used everywhere.*

PALETTE · FIVE VALUES

	#F4F2ED	Off-white ground
	#E6E3DC	Light · borders
	#A8A49B	Mid · captions, meta
	#242220	Text · warm black
	#141311	Dark · hero, devices
	#C73D28	Accent · Braun-Rot · the one colour

Used for: the equals key · every active state · every LED · timeline marker · principle numbers · corner brackets · meter needles · influence highlights. Restraint here **is** the design.

GRID & MOTION

MAX WIDTH	1160px content
CONTAINER PAD	48pt desktop · 24pt mobile
BASELINE	8-pt grid
SECTION PAD	120pt desktop · 72pt mobile
EASE	cubic-bezier(.16, 1, .3, 1)
DURATIONS	250ms hover · 600ms reveal · 1.4s settle
MOTION POLICY	Full prefers-reduced-motion respect

V · THE DEVICE LANGUAGE

Six products, *one catalogue of materials.*

The most consequential design decision in the project: **every interactive section is wrapped in chrome that reads as a real Braun device**. Same dark gradient frame, same lowercase wordmark, same orange LED, same monospace meta strip. This is what knits the whole site together.

SHARED CSS TOKENS

DEVICE BODY	<code>--device-bg</code>	· dark linear gradient
INNER WINDOW	<code>--device-window</code>	· #0e0d0a
FRAME EDGE	<code>--device-border</code>	· <code>rgba(255, 255, 255, 0.08)</code>
SEPARATOR	<code>--device-line</code>	· <code>rgba(255, 255, 255, 0.06)</code>
TEXTURE	<code>--device-grille</code>	· repeating-linear-gradient
LED ON	<code>--device-led-on</code>	· <code>var(--accent)</code>

WHERE THE TOKENS ARE USED

- **Hero** — Braun device faceplate wrapping the name
- **Principles** — ET 66 calculator frame + display panel
- **Timeline** — T 1000 World Receiver tuning dial casing
- **Index** — Studio mixer meter-rack frame
- **Legacy** — Six-channel hi-fi rack
- **HUD** — Tape-deck readout pinned bottom of every page

Define the materials once. Reuse them on every device. This is exactly how Braun's actual industrial design programme worked under Rams.

“

Indifference towards people and the reality in which they live is actually the one and only cardinal sin in design.

— DIETER RAMS

VI · EVOLUTION

From a white page *to a Braun catalogue.*

Every phase is preserved in `_process_snapshots/` so the before and after of every decision can be audited side-by-side.

PHASE 01 · v1 Self-coded base Hand-written HTML, CSS, vanilla JS. Ten product photographs. The clean foundational white version that establishes the visual system. 100% MAX · NO AI · NO PLUGINS	PHASE 02 · v2 21st.dev plugins Four React/TSX components from the open-source 21st.dev community library, re-implemented from React/Tailwind into vanilla to fit the host. 21ST.DEV · SELF-INTEGRATED	PHASE 03 · v3 Claude Code · Braun instruments Every interactive section rebuilt around an actual Braun product as interface metaphor. The calculator, the dial, the meter rack, the hi-fi rack, the device-framed hero, the HUD. CLAUDE CODE · AI-ASSISTED	PHASE 04 · v4 Multi-page architecture Colby's critique note: a single endless scroll inherently violates "less, but better." Restructured into a cover plus five focused chapters. CLAUDE CODE · AI-ASSISTED
---	---	--	--

PHASE 01 · V1

Self-coded base.

A clean white site, hand-written, opening directly in any browser. The foundation every later version is built on. No framework, no build step, no NPM install — just three files and ten product photographs.

Every line of CSS through about line 1,960 is hand-written by me. Every line of JS through about line 388 is hand-written by me. The first nine product cards are hand-marked-up.

WHAT V1 CONTAINED

- Hero with subtly-drifting modular grid background
- About section — portrait + meta list + four-paragraph bio
- Ten Principles in a 2-column card grid (later replaced by the calculator)
- Selected Work in a 3-column grid with All/Braun/Vitsø filter
- Pull-quote break section
- Legacy in a 6-card grid with custom SVG icons
- Vertical Timeline with year + content + dot marker
- Contact section with form
- Footer with credit line

v1 was understandable. It wasn't yet self-explanatory — that's the gap the next three phases close.

PHASE 02 · V2

Four React components, *adapted to vanilla.*

21st.dev is an open-source community-curated marketplace of React/Tailwind UI components. Each ships as a single TSX file. My host is vanilla, so adoption meant rewriting each one — keeping the visual idea, losing the React abstraction.

PLUGIN 01

Dot-Pattern Quote Block

Bordered frame with corner squares and a dot-grid background. Mixed-weight typographic statement. Still lives in `work.html` between chapter intro and the objects.

ADAPTED · STILL IN SITE

PLUGIN 02

Parallax Scroll Feature

Alternating left/right rows with scroll-driven copy slide-up and image clip-reveal. Powers the entire Work chapter — nine objects in detail.

ADAPTED · CORE COMPONENT

PLUGIN 03

Wave-Path Interactive Line

Spring-physics SVG line that bends with cursor and snaps back. Originally lived before contact but removed in v4 — metaphor was too abstract. Replaced by the Eleventh Principle.

REMOVED · SUPERSEDED

PLUGIN 04

Text-Rotate Scroll Gallery

Sticky left pane with character-rotating text, synced to scrolling cards on the right. Powers Designers He Shaped — 7 contemporary designers, each with a hand-drawn SVG silhouette of their signature work.

ADAPTED · CORE COMPONENT

What the adaptation taught me: word-level wrapping, character-level animation. The first text-rotate broke "Jonathan Ive" mid-word. Fix: wrap each word in an unbreakable inline-block, animate chars inside.

PHASE 03 · V3

The instrumentation pass.

Two days of pair-iteration with Claude Code — Anthropic's coding agent, Claude Sonnet, in Cowork mode. I provided design direction, Claude Code generated the implementation, I directed iteration until the visual matched intent. Six devices came out of it.

DEVICE 01

Hero · Braun device faceplate

Name sits inside a translucent device frame with the lowercase *braun* wordmark, perforated speaker-grille texture, four corner brackets, a pulsing LED, bottom readout strip.

DEVICE 02

Principles · ET 66 Calculator

Ten principles, ten keys. Principle 10 "Less, but better" in the iconic orange equals position. Display panel with accent-orange principle number + serif title.

DEVICE 03

Timeline · T 1000 dial

Horizontal scroll-driven. 11-tick rotor slides under a fixed marker. Knob rotates 36° per tick. Readout cross-fades year, event, body.

DEVICE 04

Index · Studio meter rack

Six purpose-built instruments, one per data type. Date pad / tenure bar / 10-LED row / model plate / odometer / histogram.

DEVICE 05

Legacy · Six-channel rack

Stacked hi-fi modules. Each a channel (Apple/Ive, Museums, Documentary, Education, Sustainability, Vitsøe) with LED + VU bar + LIVE readout.

DEVICE 06

Persistent bottom HUD

Tape-deck readout pinned to every page. Wordmark · chapter number · italic chapter name · scroll progress · LED · REC.

PHASE 04 · V4

One scroll became five chapters.

THE CRITIQUE THAT MATTERED MOST

"A single endless scroll inherently violates 'Less, but better.' Each screen has to do too much. Multi-page architecture where each page focuses on one subject would honour the principle more directly."

— COLBY · MID-PROJECT CRITIQUE

RESTRUCTURED INTO

INDEX.HTML	Cover · Hero + TOC
ABOUT.HTML	I · Biography + Timeline
PRINCIPLES.HTML	II · Ten Principles / ET 66
WORK.HTML	III · Nine Objects
IMPACT.HTML	IV · Numbers + Legacy + Influence
INVITATION.HTML	V · Eleventh Principle

Plus: The abstract Wave "Discipline Test" was killed. Replaced with **The Eleventh Principle** — a single-word user contribution that closes the loop.

VII · WALKTHROUGH

Six pages, *six instruments.*

One page per subject. Each Braun-device metaphor lives on one chapter.

Cover Introduction Braun-framed hero + TOC index.html	I Chapter 01 Biography T 1000 World Receiver tuning dial about.html	II Chapter 02 Principles ET 66 Calculator keypad principles.html	III Chapter 03 Work Parallax catalogue spread work.html	IV Chapter 04 Impact Meter rack + hi-fi rack + sticky text impact.html	V Chapter 05 Invitation Single-input · Closing mantra invitation.html
--	---	--	---	--	---

— PAGE 01 · INDEX.HTML

Cover. *Two things only.*

The cover introduces the subject (the Braun-framed name) and gives the reader the table of contents. Nothing else. No long-form copy. No "about Max." A single hero, a five-row contents block, one line of credit.

*The page exists to **orient**, not to **perform**. The most explicit application of "less, but better" anywhere in the site.*

WHAT'S ON THE PAGE

- Full-viewport hero · modular-grid background drifting subtly
- Braun device faceplate wrapping the name
- "Dieter Rams" in sans-light 112pt · "Less, but better" in serif italic
- Era · Origin · Studio readout strip along the device bottom
- Single chapter-contents list · 5 rows linking to Chapter I–V
- Footer with credit + keyboard hint
- Persistent chapter rail and HUD pinned at the edges

PAGE 02 · ABOUT.HTML

Architect of *quiet objects.*

Two halves. First: a traditional editorial layout — portrait + meta + bio.
Second: the Braun T 1000 tuning dial.

WHY A DIAL, NOT A LIST

- Reading chronology by year-event-year-event is exactly how a tuner panel works
- The metaphor is recognition, not decoration
- 11 ticks · scroll-driven · knob rotates 36° per step
- Year, event, body all cross-fade on each stop

PAGE 03 · PRINCIPLES.HTML

Ten principles.

Ten keys.

The hardest page to design. The principles are the most-quoted text in industrial design — every Rams tribute lays them out as a numbered list. I needed a treatment that *wasn't* a list.

- Ten principles → ten keys, 3×4 grid like the real ET 66
- Principle 10 "Less, but better" sits in the iconic orange equals position
- Click, hover, or press **1** — **9** / **0** on keyboard
- Display panel cross-fades the active principle's number + title + body
- The equals key is where the calculator says *"this is the answer"* — the joke wrote itself

braun

10

LESS, BUT BETTER

Nine objects, three decades.

From the SK 4 Snow White's Coffin (1956) to the calculator that taught Apple how to lay out a keypad (1987).

CAT. 01 · 1956

SK 4 Phonosuper

First clear-lid hi-fi. With Hans Gugelot.

CAT. 02 · 1958

T 3 Pocket Radio

Direct ancestor of the iPod.

CAT. 03 · 1958

L 2 Speaker

Perforated grille as the whole design.

CAT. 04 · 1960

606 Shelving

Still in production. Unaltered.

CAT. 05 · 1962

620 Chair Programme

Modular seating that reconfigures with the household.

CAT. 06 · 1963

T 1000 World Receiver

A measurement instrument for radio.

CAT. 07 · 1972

Citromatic MPZ 21

Design system on the breakfast table.

CAT. 08 · 1987

AB 312 Alarm Clock

Utility and beauty aren't opposites.

CAT. 09 · 1987

ET 66 Calculator

Colour-coding as instruction manual.

Rendered as alternating left/right parallax rows with scroll-triggered copy slide-up and image clip-reveal. Each row has a 4-cell technical spec dl underneath.

Three instruments, *one answer.*

Three Braun-instrument metaphors on one page because they all answer the same question: *what does the work add up to?*

CH · 01 · Studio meters

6

By the Numbers

Six purpose-built instruments — date pad (Born), tenure bar (42 yrs), 10-LED row (Principles), model plate (606), odometer (500+), histogram (40+ museums). Each matches its data type.

CH · 02 · Hi-fi rack

6

Legacy Channels

Six channels broadcasting — Apple/Ive, Museums, Documentary, Education, Sustainability, Vitsœ. Each module has its own LED VU bar showing "10/10 · LIVE".

CH · 03 · Influence gallery

7

Designers He Shaped

Sticky left pane with character-rotating name. Right pane scrolls through 7 typographic product cards — Ive's iPhone, Fukasawa's MUJI CD, Morrison's Air Chair, Newson's Watch, Hecht's cookware, Grcic's Chair_One, Jongerius's Polder Sofa.

PAGE 06 · INVITATION.HTML

The eleventh principle.

Rams stopped at ten. The framework was complete in 1976. But every designer who works with it long enough eventually adds their own.

The site's final move: a single typographic prompt asking the visitor for their contribution.

THE CLOSING INTERACTION

Principle 11 · Good design is

alive

05 / 14

ONE WORD. LESS, BUT BETTER.

ADD TO THE FRAMEWORK →

- 14-char counter · warns at 12 · red at 14
- Submit → stamped · dated · filed as Principle 11 · copied to clipboard
- Followed by full-bleed closing mantra panel

CLOSING
MANTRA

Weniger,
aber
besser.

LESS, BUT BETTER.

THE LAST FRAME OF THE SITE · ECHOING ON EVERY CHAPTER CLOSING

NAVIGATION BETWEEN CHAPTERS

Four ways to move.

01 · TOP NAV**Primary horizontal nav**

Five chapter links in the fixed header. Active chapter underlined in accent orange. Backdrop-blurred on scroll.

02 · CHAPTER RAIL**Right-edge vertical rail**

Six tick marks — one per chapter plus Cover. Current chapter highlighted. Auto-inverts on dark sections.

03 · CHAPTER FOOTER**Previous / Next at end**

Bottom of each chapter: two editorial cards with ← prev and next → links, naming the adjacent chapters by Roman numeral.

04 · KEYBOARD**Digits + j/k**

0 — **5** jump to any chapter. **j** / **k** next/previous. **?** shows the full help panel. **gg** to top.

Plus: every page has the persistent bottom HUD tape-deck readout showing current chapter · italic name · scroll progress · REC.

VIII · TECHNICAL CRAFT

The stack, *deliberately thin.*

STACK

MARKUP	HTML5 · semantic elements · ARIA
STYLES	Vanilla CSS · custom properties · flex/grid
SCRIPT	Vanilla JS · IntersectionObserver · no dependencies
FRAMEWORK	None · no React / Vue / Tailwind / jQuery
BUILD	None · no bundler · no NPM install
FONTS	IBM Plex · Google Fonts CDN · 3 families
IMAGES	10 optimised JPGs · public-domain Braun/Vitsø
TOTAL WEIGHT	~115 KB across 6 pages · excl. images

ACCESSIBILITY & PERFORMANCE

- Full prefers-reduced-motion respect · every animation has an instant fallback
- Skip-to-content link · every page
- Focus-visible rings tuned to accent · keyboard-only friendly
- Semantic HTML — `<nav>` , `<main>` , `<article>` , `<section>` , `<aside>`
- Alt text on every image
- ARIA labels on all custom interactive widgets
- Responsive down to 360px viewport width
- Print stylesheet for the ten principles

VIII · KEYBOARD NAVIGATION

Power-user controls.

Every chapter of the site is addressable by a single keystroke. Every animated interaction has a keyboard equivalent. Nothing on the site requires a mouse.

0	Cover page	1	I · Biography	2	II · Principles
3	III · Work	4	IV · Impact	5	V · Invitation
j	Next chapter	k	Previous chapter	?	Help panel
g g	Scroll to top	Esc	Close any panel	1 – 0	On II · principle keys

The keyboard panel itself lives in the bottom-right corner of every page — a small ghost-button labelled "Press ? for keys." Click or press to toggle.

VIII · BY THE NUMBERS

The whole system.

A complete accounting of the final deliverable.

06

IX · WHAT I LEARNED

Three things I didn't know going in.

01 · LOAD-BEARING METAPHORS

Skeuomorphism gets a bad name because it's usually decorative — leather calendars, felt poker tables. What I learned: skeuomorphism *works* when the metaphor does real navigational work. The calculator keypad is an actual interface for choosing a principle. The dial is an actual interface for moving through a timeline. Not decoration — structure.

02 · HONOUR BY APPLYING

My first instinct was to add. Another section, another readout, another animation. The most consequential edits in this project were all *subtractions* — deleting the original Work grid, replacing the wave Discipline Test with a single-input form, splitting the long scroll into focused pages. Every removal made the site closer to what Rams actually argued for.

03 · AI CHANGES THE TEMPO

Working with Claude Code let me try and discard ideas at a speed I couldn't on my own. The first meter rack used identical dials — wrong. We replaced it with six purpose-built instruments inside the same hour. Bad ideas that would normally take a week to admit and remove took a half-day. A different working method — worth being honest about.

X · AI USE DECLARATION

Honest accounting.

In the spirit of Principle 6: *good design is honest*. A clear record of every external tool used.

ORIGINAL CONCEPT	100% Max McDonough. Designer selection, narrative arc, visual system, the Braun-instrument metaphors, every design decision.
BUILD PHASE 1 (V1)	100% self-coded. Hand-written HTML, CSS, vanilla JS. No AI, no plugins. Foundational version every later phase is built on.
BUILD PHASE 2 (V2)	Self-integrated. Four React/TSX components from 21st.dev (open-source community library) re-implemented by me from React/Tailwind into vanilla HTML/CSS/JS.
BUILD PHASE 3 (V3)	AI-assisted. Claude Code (Anthropic coding agent · Claude Sonnet model · Cowork mode) used as pair-programmer for the Braun-instrument language. I directed; Claude implemented; I iterated.
BUILD PHASE 4 (V4)	AI-assisted restructure. Multi-page architecture following Colby's critique. Architectural decision was the instructor's; implementation was AI-assisted.
UX RESEARCH DELIVERABLES	100% Max McDonough. All 8 research PDFs + design board + Hi-Fi prototype authored prior to any AI involvement.
PROCESS BOOK · SCRIPT · DECK	AI-assisted writing. Drafted with Claude Code, reviewed & edited by me. Arguments are mine; prose iterated together.
IMAGES & TYPE	Public-domain Braun / Vitsœ photography. Rams portrait under CC BY-SA 3.0. IBM Plex (OFL) via Google Fonts. No AI-generated images.

— THANK YOU —

Weniger,
aber
besser.

LESS, BUT BETTER.

— MAX MCDONOUGH · INTD-215 · SPRING 2026
